

DURABLE LAMINATION FILM

Above 2 (A) laminate for delirigent packaging. Our white opaque PE film, laminated as the support layer to a reverse printed PET film, for excellent fuel-through-contaminator

LAMINATION FILM

Our PE Lamination films are reliable, barrier, seal-through-contaminant films used as the sealant layer in multi-layer laminate pouches. The film forms an inner sealant layer by providing an excellent moisture barrier as well as adding durability and seal integrity.

KEY FEATURES

3 layer co-extruded blown film made of PE-mLLD/LD/HD

Accurate gauge distribution for optimum yields

Excellent Seal-Through-Contaminant and hot tack

Differential coefficient of friction between inner and outer layers for a good bond with the laminate – at the same time easy machineability on high speed FFS applications

Superior bond with PET, PP, paper and aluminum foil substrates

Available in transparent as well as in opaque colors

Manufactured with internal bubble cooling for superior optics

Accurate corona pre-treatment of lamination layer

MARKETS

Shampoo, detergent and hair oil

Instant and snack food – fruit juice (concentrates), cheese, ketchup, tea, coffee and salt

Edible oil and vegetable seeds

Laminates and lidding

X-ray film, pesticides and pharmaceuticals

QUALITY

ISO 9001:2000 compliant

Fully automatic controlled extrusion process

Material input of the highest quality standards

Tailor-made formulated films to suit individual applications

STANDARD PRODUCT SPECS

Specifications	Product Availability	Units
Thickness	20 - 200	microns
Width	500 - 1550	mm
Weight	50 - 200	kgs/roll
Corona Pre-treatment	56	dynes/cm max
Paper Core ID	76	mm
Colour	Transparent/opaque - different colours on either side of the film	
Base Polymers	PE-LLD, mLLD, LD, HD, EVA
